

Potato Nutrition

Support Tuber Initiation

Our Solution...

Tokio 9-54-6 + TE (Fe, Mn, Zn, Cu and B)

- Supplies N, P and K in highly available forms whenever the plant is growing rapidly and nutrient uptake from the soil might be reduced
- Initiates Tubers
- Trace elements (except B) are EDTA chelated for more efficient uptake
- High concentration nutrients as water dispersible granules- low application rates
- Compatible with pesticides
- All products formulated in Europe from high quality raw materials to ensure good stability, miscibility and high concentration with optimum uptake by the plant
