## **Most Micro - New herbicide from Sipcam**

Sipcam has introduced a new non-staining Pendimethalin herbicide to the UK market. Most Micro is a capsule suspension formulation containing 365 g/l Pendimethalin, for the control of annual grass and broadleaved weeds in a range of crops.

Based on the company's proprietary 'Microplus' technology, the microcapsule formulation ensures consistent release of the active ingredient, giving effective broad spectrum weed control. Keeping the active agent within the microcapsules minimises discolouration of equipment and clothing.

Paul Hunter of Sipcam said:

"Microcapsule formulations offer significant advantages in user and environmental safety over other preparations. In this case, because Pendimethalin is yellow staining, it also helps in keeping users and equipment clean. Most Micro brings these significant advances to UK growers, whilst maintaining the company's value for money philosophy."

Sipcam is exhibiting at LAMMA in Hall 7, stand 749.
