

## BULLDOG – EXTENSION OF USE

Bulldog is a 15.6/313g/l mixed formulation of diflufenican and pendimethalin and has been registered for pre-emergence use on winter cereals under MAPP 17538.

The Chemicals Regulation Directorate (CRD) has recently granted on label use for post-emergence use on winter barley and winter wheat to GS30 and pre-emergence use on spring barley and spring wheat.

Details are listed in the table below:

Crops/situations:	Authorisation Number	Maximum individual dose: (l product / ha)	Maximum number of treatments: (per crop)	Latest time of application:
Barley (winter), wheat (winter)	2662 of 2016	4.2	1	Before leaf sheath erect stage (GS30).
Rye (winter), triticale (winter)		4.2	1	pre-crop emergence
Barley (spring), wheat (spring)		4.2	1	pre-crop emergence
