

Efficient N for Milling Wheat

Sipcam's Efficient N is a combination of readily absorbed N in both the ureic and urea polymer forms designed to support strong and healthy crop development.

The cold wet spring has caused many growers to revise yield goals and reduce N application as a consequence. The recent heavy downpours are also leaching fertiliser N from the soil. With the current differential in price between milling and feed wheat at over £20/t it is important for farmers to get protein in milling wheat to the required level in the most cost effective way.

Efficient N can be applied through the farm sprayer and is compatible with most fungicides and insecticides. Foliar applied urea after ear emergence increased grain protein more effectively than broadcast ammonium nitrate.

Available in 1000l ibc's = 40ha

RECOMMENDATIONS

Wheat: To boost protein levels apply 25l/ha Efficient
