

Help OSR establishment for less than £5/hectare Tokio 9-54-6 + Micros

- Limitations of insecticides makes it essential to get OSR growing as rapidly as possible to minimise damage.
- OSR plants require phosphate during this rapid growing period, but availability of soil applied phosphate may be as low as 4% (AHDB project 570).
- Application of foliar applied phosphate is much more effective and can help plants establish good root systems which are then more able to take advantage of the soil reserves of both nutrients and water.
- This can also increase the plant's ability to withstand further stress should we get further dry weather.

Solution - Sipcam Tokio

- Sipcam Tokio can be sprayed as soon as plants develop leaves, & although designed for foliar application roots can also absorb any nutrients which reach the soil.
- The high rate of P helps good root growth and establishment when soil uptake may be limited
- Micro-nutrients are chelated to improve uptake.
- OSR APPLICATION RATE: 2.5 - 3.0 KG/HA 5KG PACK
