

UMOSTART®

Umostart is a microgranular starter fertiliser developed to provide nutrients precisely where they are needed at the time when they are most valuable – at plant establishment.

The benefits of using Umostart include:

- 25 x more P available to the plant
- precise placement gives high plant uptake
- low application rates cut residues and leaching
- significant savings on transport and storage

Umostart rate is dependent on each individual situation. Soil testing is advised prior to application to determine specific, in season, crop requirements.

APPLICATION RATES

CROP	LABEL RATE (KG/HA)	RECOMMENDED RATE (KG/HA)*
CEREALS	30-60	10-20
OILSEED RAPE	30-60	10-20
