

BLACKJAK®

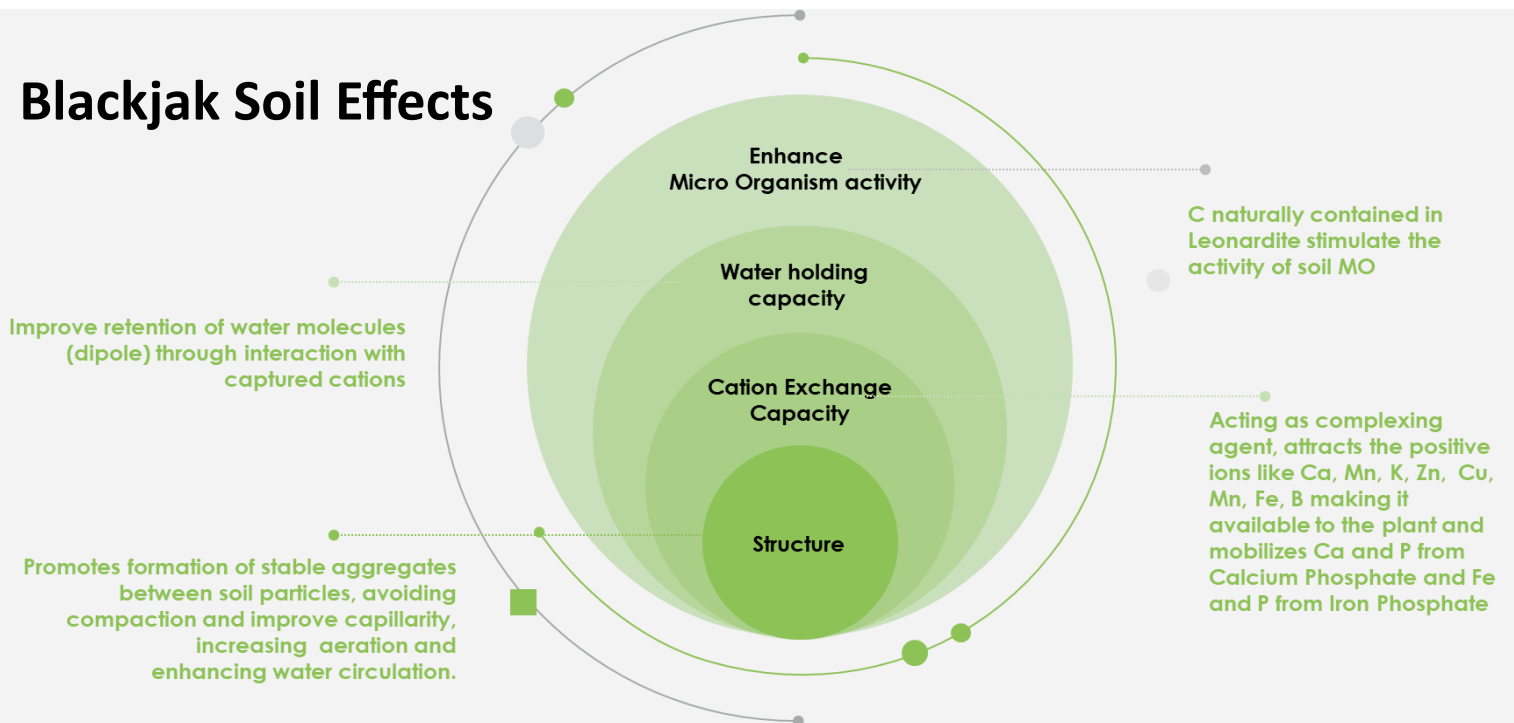

BLACKJAK is a Suspension Concentrate of Leonardite, obtained from a unique physical process that preserves all natural components of Leonardite, with acidic pH and effective at much lower rates than the ones recommended for the humates and other alkaline-processed formulations

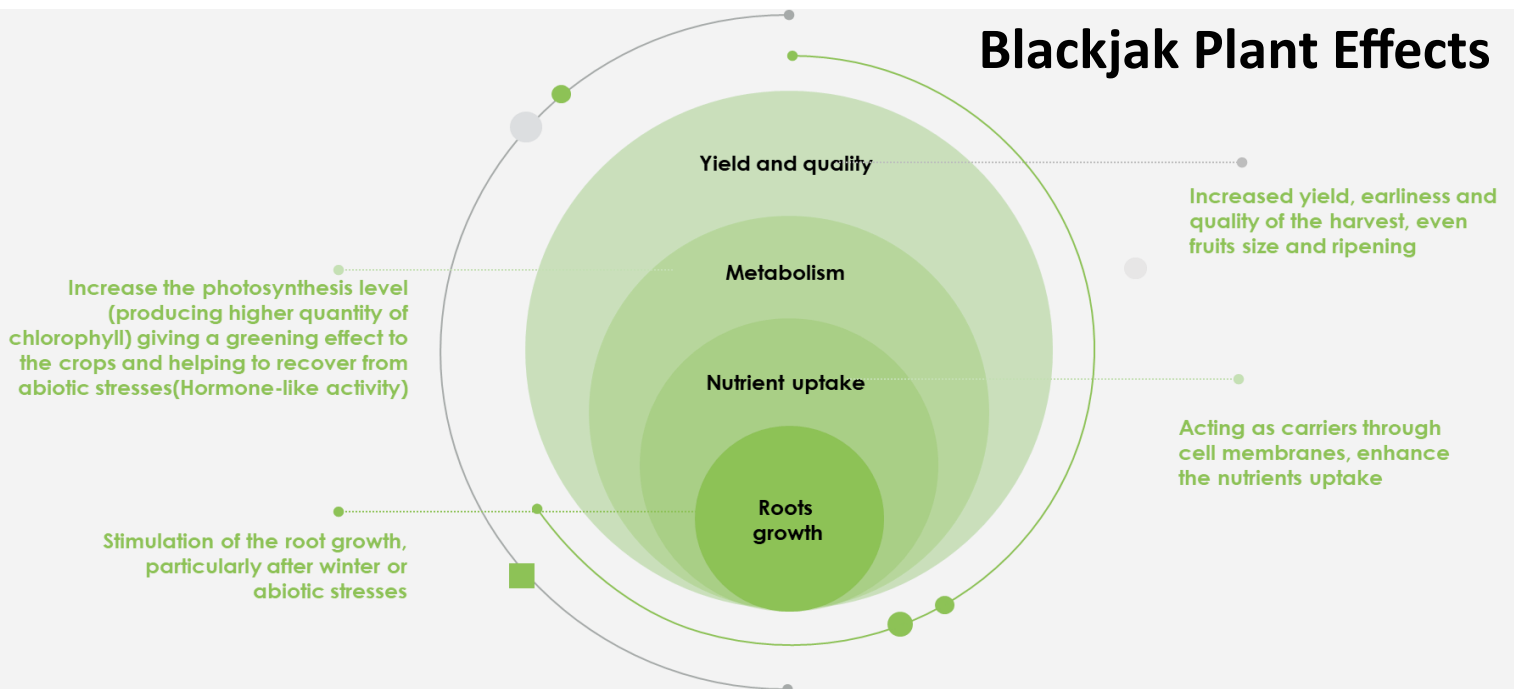

What are the components of Blackjak?

Blackjak Soil Effects

Blackjak Plant Effects

Why Blackjak?

- No harsh extraction, retains 100% of natural content
- Acidic pH (4-5), with rapid uptake due to low molecular weight
- 100% natural content of humic, fulvic, ulmic acid and humins
- Soil and foliar acting
- Enhance plant resistance, and boosts plant metabolism
- Enhances soils and crop nutrition
